

OpenFOAM_Cases-Diffusion

The below cases were simulated using oepnFOAM. The cases are only concerned with pure diffusion. Each example has a seperate solver.

Case of Pure Disffusion :

The below equation describes a state of pure diffusion :

$$R\sqrt{1-v}$$

|:-😬 | Initial State with boundary conditions |

| Final State |

Case of Pure Disffusion with Source :

|:-😞 | Initial State with boundary conditions |

| *Final State * |
